## And the April Showers Came

*We've given each other some hard lessons lately  
But we ain't learnin'  
We're the same sad story that's a fact  
One step up and two steps back...  
—Bruce Springsteen, "One Step Up"*

For most of this year, it has been a case of one big step up for the equity markets. In fact, in the first quarter, stocks experienced a remarkable step up, with the broad domestic market logging big gains of nearly 10% on the S&P 500.

Then the April showers came.

As of this writing on April 25, stocks in the S&P 500 remain higher year to date, but that 10% gain has dwindled to just a 5.8% year-to-date gain—and the trajectory in the weeks leading up to this writing has been decidedly downbeat. Now, I won't go as far as Bruce Springsteen and say that it's a case of "one step up and two steps back," but I will say that this market does feel like the "same sad story that's a fact."

So, what is the same sad story disappointing stocks here? It's the disappointment directed at the Federal Reserve.

I say that, because the key event that triggered the most aggressive selling was the disappointing speech on April 17, when Federal Reserve Chairman Jerome Powell acknowledged the lack of further progress in falling inflation. The market took Powell's words as decidedly "hawkish," and the result ever since has basically been a risk-off, volatile reaction from traders.

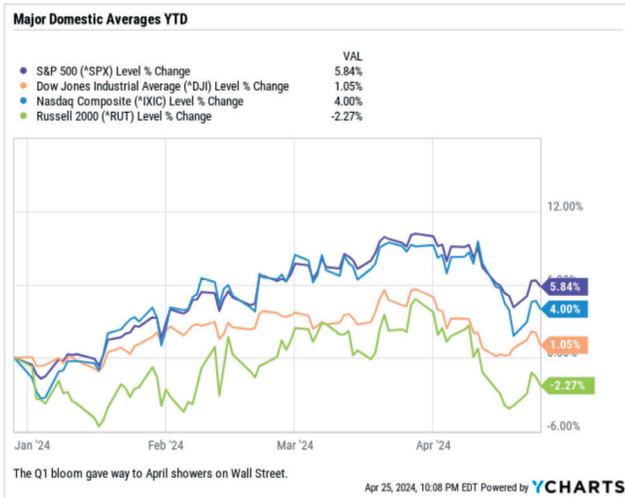

Now, I must say that when I read what Powell actually said in the aforementioned speech, my take-away was that he really wasn't all that hawkish. Yes, Powell's comments did represent a shift compared to his previous hints towards a June interest rate cut. But the fact is what Powell said merely confirmed what the market had already been pricing in leading up to that speech. Point being, the Fed chair's comments were not a new hawkish negative for stocks. Rather, they merely confirmed that the recent rise in bond yields back to November levels is now a more appropriate and realistic expectation.

What Powell also signaled to markets is that there will be no rate cut at the June Federal Open Market Committee (FOMC) meeting. And according to the market, there will now likely only be one, or at the most two, rate cuts by year's end. Oh, and that first rate cut has now been priced in to take place at the September FOMC meeting.

Borrowing from Bruce Springsteen, I'd say that's a lot more than "two steps back" for rate cut expectations. I say that because at the start of the year, the consensus among Fed watchers was for as many as seven 25-basis-point rate cuts by year's end! That's a big change in monetary policy expectations, and that repricing of monetary policy reality is the chief reason for the decline in markets since our last issue.

Now, if you've been a subscriber for even a modest length of time, you know that I am an optimist by nature. Yet you also should know that I'm all about objective reality. That means I let the facts dictate my analysis of the markets and their likely direction going forward. And in that spirit of optimistic realism, there remain plenty of reasons to be bullish here despite the near certainty of no more than two, and more likely just one, 25-basis-point cut in the federal funds rate by year-end.

I say that because despite the selling we've experienced in April, the wider outlook for stocks hasn't really changed that much. What has changed is that investors no longer have unrealistic expectations about steadily falling inflation, near-term Fed rate cuts and, to a much lesser extent, impervious earnings results. So, the rate cut disappointment is the reason the S&P 500 has declined about 5% from the highs—and I stress this, *not* because fundamentals have materially deteriorated.

Instead, it's because the news and data suddenly stopped fueling the unrealistic rate cut notions and far-too-optimistic falling inflation expectations.

As such, this market has had to come back to earth, and that 5% descent off the highs is what I consider well-warranted and reasonable reaction.

Yet when we widen our lens from the focus of the action in the latter half of April and look at things from the proverbial 30,000-foot vantage point, we can see that the following bullish landmarks remain mostly in place. Those landmarks are the following:

**Solid economic growth.** Economic data, while mixed, is still basically solid. And despite slower-than-expected growth seen in the Q1 advanced gross domestic product (GDP) metric, other metrics such as Retail Sales, Philly Fed and jobless claims all reflect stable growth. More importantly, there are simply no major economic metrics flashing a warning sign on growth.

**Falling inflation.** Data here is mixed to be sure, as the decline in the Core Consumer Price Index (CPI) has stalled while oil and other commodities risk boosting headline inflation. But at this point, inflation is still declining, it's just declining much more slowly than previously expected.

**Looming Fed rate cuts.** There's mixed information here, but it's reasonable to assume that the next Fed move will be a rate cut. When that first cut actually will occur is obviously an open question (remember, markets don't expect a cut until September).

Yes, rate cuts may be delayed compared to earlier

expectations, but they are still likely the next move by the Fed as opposed to new rate *hikes*, such as some pundits have speculated may be next. Of course, this could change with continued "hot" inflation data. But right now, that data isn't reflective of a material rise in prices.

**AI enthusiasm.** Artificial intelligence (AI) darling NVIDIA Corp (NVDA) shares saw a rather sharp pullback in April, the first in a long time. Other big players in the AI segment such as ASML Holdings (ASML) and Taiwan Semiconductor (TSM) each issued demand warnings going forward for their AI-related semiconductors. Still, AI enthusiasm remains largely in place, and the price action and news in this darling space represents more of a moderation of that enthusiasm, not a reversal of it.

The bottom line here is that when markets decline, investors get nervous, even if it's after such a fantastic run as we've had over the past 16 months. Yet, based on the objective facts, the only thing that's materially changed in this market is that events haven't lived up to unrealistically positive expectations.

Perhaps those expectations will be rationally

adjusted, but given that the market feeds off emotion, we are likely to see a lot more volatility as investors dial in the proper price for equities. Fortunately, one of my superpowers is understanding market emotions and positioning our money to take advantage of whatever the mood dictates. And as this earnings season unfolds, I will continue to

do just that.

### The Dovish Surprise Factor

On April 23, markets woke to “soft” flash composite Purchasing Manager’s Index (PMI) data. This report sparked the so-called “bad-is-good” market reaction to economic data, as the underwhelming reading was seen as making the Fed slightly more dovish. That, in turn, pushed Treasury yields slightly lower. And because rising Treasury yields and delayed expectations for Fed rate cuts are the primary cause of the April pullback, stocks rallied as the soft flash PMI does slightly reverse those two events.

As previously mentioned, at the start of the year investors unrealistically expected a very dovish Fed. That left the market vulnerable to hawkish disappointment via “sticky” inflation. Now, markets have priced in a dramatically less-dovish Fed (maybe just one rate cut) and that’s left this market vulnerable to a dovish surprise, which is exactly what happened amid the underwhelming flash PMI. If more data underwhelms in the weeks ahead, expect lower yields and higher stock prices.

However, let me stress this important point: Bad economic data will *not* be good for stocks beyond the very near term. Slowing growth that forces the Fed to cut earlier than expected is a material negative for equities due mostly to valuations. If investors must price in a legitimate chance of a hard landing, it won’t matter what the 10-year yield is doing—stocks will decline.

The intermediate best case for stocks is solid growth with stable rates. That’s much better than bad data with the Fed chasing the economy lower with rate cuts. So, if we start to see underwhelming data, then long-dated Treasuries are the absolute winner and that’s the place to run towards if growth begins to slow.

Finally, while a bad-is-good market reaction to data may lead to a 5% rebound, if metrics really deteriorate, that opens up the possibility of a 10-20% (or more) decline. Conversely, solid growth data and stable yields underwrite a potential run toward 5,700 in the S&P 500, and that’s the outcome we should all be pulling for.

### An Income Multipliers Update

Before we dig into the details, let’s first check the scorecard. So far in 2024, the total return on the Dow Jones Industrial Average is 1.59%. The total return on our Income Multipliers is 2.64%. That is solid outperformance in a portfolio that is currently also delivering an average yield of

### Top 20 Income Multipliers YTD

Stock	Ticker	Total Return YTD
Lowe's	LOW	4.39%
McDonald's	MCD	-6.50%
Procter & Gamble	PG	10.88%
Walmart Stores	WMT	14.84%
Exxon Mobil Corp.	XOM	21.54%
Truist Financial Corp (Formerly BB&T)	TFC	4.50%
PNC Financial	PNC	2.70%
Johnson and Johnson	JNJ	-4.10%
Medtronic Inc.	MDT	-1.36%
3M	MMM	-13.89%
Caterpillar	CAT	21.83%
Cummins Inc.	CMI	21.92%
General Dynamics	GD	13.24%
Union Pacific	UNP	-4.01%
Automatic Data Processing	ADP	6.33%
Texas Instruments	TXN	-3.36%
Albemarle Corp.	ALB	-22.00%
American Tower REIT	AMT	-19.44%
Verizon, Inc.	VZ	5.92%
Zimmer Biomet (103:100 stock split on 3/4/2022)	ZBH	-0.56%
<b>Average Return</b>		<b>2.64%</b>

3.04%.

That outperformance comes courtesy of the big winners in the industrial sectors. The two biggest are Cummins Inc. (CMI) and Caterpillar (CAT). Now, CAT recently reported earnings that beat on earnings per share, but that missed expectations on revenue. Still, CAT is a juggernaut, one that I think will continue to power higher. CMI is slated to report results on May 2, so we will soon see how the diesel engine giant did in Q1. I am expecting another big quarter, so be sure you own this one.

Another position here to own is telecommunication giant Verizon (VZ). The company recently reported Q1 earnings that fell from a year earlier, but that also bested analysts' estimates. The company also did better than expected on the all-important postpaid phone customers metric. The key here to VZ's success is the new 5G build cycle, which will contribute mightily to VZ revenues.

Now, while tech stocks aren't the bulwark of an income portfolio, one well-established big-tech giant has come in strong of late, and it is Texas Instruments (TXN). On April 23, the semiconductor maker reported results that handily beat estimates. TXN also guided higher on both the top and bottom lines for Q2. Shares have seen a nice pop post-earnings, as momentum into this stalwart stock continues to drive the share price.

One of the top performers in the Income Multipliers in recent years has been oil giant Exxon Mobil Corp (XOM). On the morning of April 26, XOM reported Q1 earnings that were, admittedly, a disappointment. The company indicated Q1 EPS was \$2.06, which is down 27% compared to the same quarter a year ago. Revenue also declined 4% in the quarter year over year to \$83.08 billion. Analysts had predicted earnings of \$2.19 and revenue of \$79.69 billion.

Now, I am not too concerned with this report, especially considering some of that revenue shortfall was due to tumbling natural gas prices. Still, we want earnings to push higher, not lower. Yet with a gain of 21.54% year to date, XOM continues to represent a stellar performer that you must have in your income holdings.

### Tactical Trends Portfolio (TTP) Update

The wider pullback in markets in April has put pressure on nearly all segments of the market; however, our positions in the Tactical Trends Portfolio (TTP) continue to deliver big. Our average position now is up 27.9%, which is only slightly below where it was in our last issue.

Our broader position in the Invesco S&P Equal

## Protection Portfolio

Weight ETF (RSP) is off its late-March high; however, in the week leading up to this writing, we've seen the RSP make a nice move back toward its 50-day moving average. So, despite the repricing that went on due to rate cut disappointment, the bulls are still running with RSP.

Finally, the big mover of late has been Prairie Operating Co. (PROP). Shares are up a whopping 41.40% in the six weeks since our buy, a move that comes as oil prices have risen on a geopolitical fear

bid in the Middle East.

If you are still on the fence about Prairie, and if you have yet to add it to your holdings, I strongly recommend you do so here as a bullish confluence of global conditions, along with bullish pending corporate circumstances, are likely to keep pushing this stock onward and upward. For more on Prairie and why I like this play here, check out my special report titled, "Little House on the Prairie: One Unknown Oil Operator's Powerful Profit Potential," which [you can read here](#).

# What's Up & What's Down

With nearly the first third of the year in the books for the markets, the What's Up, What's Down column doesn't look quite as upbeat as it did after the first three months of 2024. That said, stocks in the major indices are still clinging to year-to-date gains, although those gains look minute in comparison to the performance of stocks in 2023. Of course, they are far better than the bearish market we saw in 2022, so right now the market is pricing in all the data and attempting to determine the proper value, and just what might be next in terms of monetary policy and economic data.

One metric of note here is that the Dow Jones

Transports are down 3.8% year to date. The Transports diverging from the Industrials is a traditional inflection point for "Dow Theory," which has a near-century-long track record of predicting long-term shifts in market direction. Another interesting note here is the shine in gold, which is up 12.8% year to date. And speaking of leaders, in the S&P sectors we see Energy leading the charge higher followed by Telecommunications, while Information Technology has, somewhat surprisingly, seen laggard performance. Financials also have been a bright spot, while Consumer Staples form the one sector with negative results year to date.

Since our last issue, the price of gold has spiked to an all-time high. The move higher in gold has prompted many readers to write in and ask if it's time to add to their holdings in the yellow metal. Well, the short answer is... "Yes." However, for a more comprehensive answer to any question related to precious metals, I always turn to my friend, former U.S. Army colleague and the very best mind I know in the gold arena, Rich Checkan, president and COO of Asset Strategies International (ASI).

ASI is a full-service tangible asset provider that deals in precious metals and rare U.S., world and ancient coins. Rich oversees the operations, administrative, sales and marketing departments, and serves as ASI's compliance officer. He also writes the monthly newsletter *Information Line*, a publication that I am honored to contribute to regularly.

I recently asked Rich if he would lend us his expertise, as I want you to hear what a true gold expert has to say about this market, and why right now might just be the best time to buy gold.

So, Rich, take it away...

---

Gold is at all-time highs, and that means it's dirt cheap. I said this a year ago, and it remains true today. Look at the chart below of spot gold prices.

For the past several months, gold has surged, and it's easy to get caught-up in the price action. Some investors see the new high as the destination. They believe (or more likely hope) that gold has hit its peak price and will pull back for them to acquire it more cost-effectively.

But they have it all wrong.

Aside from a brief spike in the gold price due to

the Covid pandemic, gold has been consolidating for years between \$1,800 and \$2,100 per ounce. That is not the price action of a metal at its peak. Rather, it is the price action of metal building a base of support for the next leg up. Gold has not been banging its head on the ceiling. Gold has been building the launching pad for the next bull market.

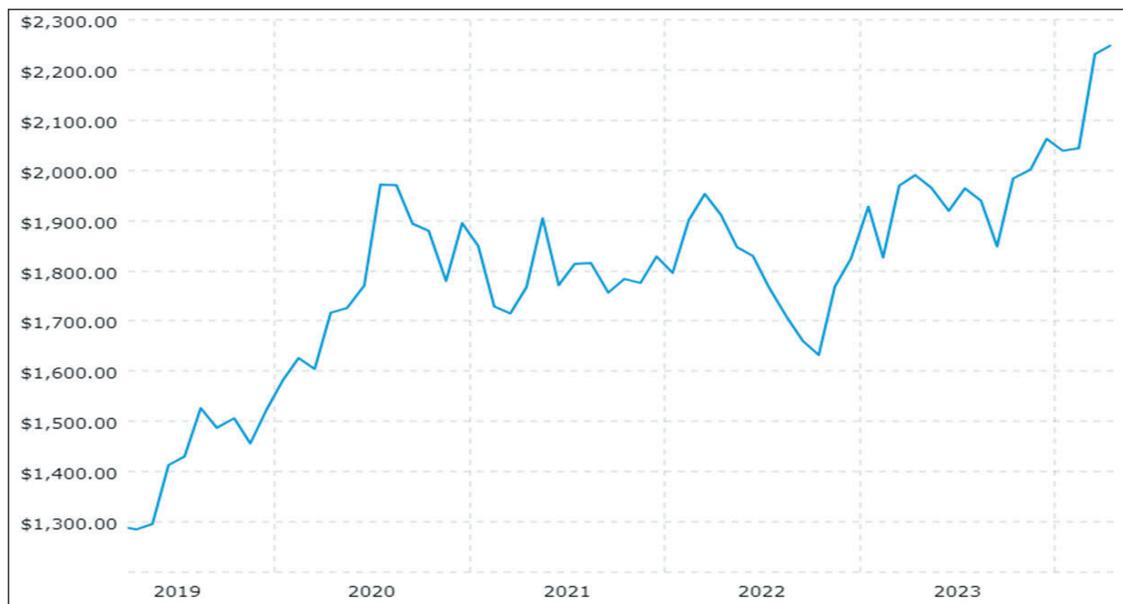

I hear a lot of investors bemoaning the fact they did not buy gold sooner. As a result, they feel they have missed out, and they are hoping for a pull-back to acquire some. This is not rational thinking. This is an emotional reaction. Given the current environment, the absolute best time to buy gold was yesterday. The next best time is today.

Why do I say that?

Simple. Gold has been building up energy for this move for several years. It has a firm base of support. All it needs now are investors. Up to this point, the gold price has been supported in this consolidation phase by purchases from high-net-worth investors and by central banks. However, with the hint of interest rate cuts on the horizon, everyday investors are warming to gold... and they should.

No presidential candidate has the intestinal fortitude to cut entitlements. Nobody in Congress has the intestinal fortitude to cut spending and balance a budget. Unless that changes, the gold price will go higher over time. Let me say that again: Unless that changes, the gold price *will* go higher over time.

We cannot afford the entitlements that are promised such as Medicare, Medicaid, Social Security, pensions. We cannot afford to pay for the things Congress has agreed to buy in the budget. Heck,

soon, we will not even be able to afford the interest on our \$34-trillion national debt.

As a result, and so as not to have a currency default, they will expand the money supply. That will water down the value of every dollar in circulation, and that will cause the cost of everything of any value whatsoever to move higher in price. There is absolutely no alternative once Congress and the president overspend.

Gold's price will go higher. The question for you is, "Do you want to buy gold now, or do you want to buy more expensive gold in the future?"

—*Rich Checkan*

Big thanks to Rich and the team at Asset Strategies International for allowing me to bring his thoughts on gold to you. And if you want to buy physical gold, ASI is the only team I can unequivocally vouch for, as they are men and women of the finest character, knowledge and experience. If you need gold or silver, you need [Asset Strategies International](#).

### Keeping ItReal

A lot of people these days like to use the term "real" to describe something or someone they admire. We say reverently that he or she is the "real deal," or this team is "for real," or this macho specimen is a "real man" or that this restaurant serves up "real Chinese cuisine," etc. Hey, I use the term "real" too, as we all know what it means, even if it can be used in many different contexts.

In 1996, "real" rap music icon Ice-T released his sixth studio album titled, "Ice-T VI: Return of the Real." Now, I bring up Ice-T here not just because of his "realness," but also because he happens to be the celebrity keynote speaker at this year's largest gathering of free minds, FreedomFest.

I will be there, along with my fellow Eagle

Financial Publications scribes George Gilder and Mark Skousen. This event is going to be amazing, as it features one of my favorite thinkers, Steven Pinker, as one of the keynote speakers. We also have one of the world's most intriguing political figures, President Javier Milei of Argentina, who will also deliver a keynote address.

If you want to attend FreedomFest this year (and why wouldn't you?), I will make it easy for you. This year's conference takes place in Las Vegas, July 10-13, 2024, at the Caesars Forum Convention Center. And because you're a subscriber, I can offer you a very special discount of \$50 off the registration price.

To take advantage of this special discount, simply [go here](#), or call Hayley at 855-850-3733, ext. 202. Use the discount code **EAGLE50** to get \$50 off the registration price. (This discount ends on April 30, so act now.)

In the name of the best within us,

Jim Woods

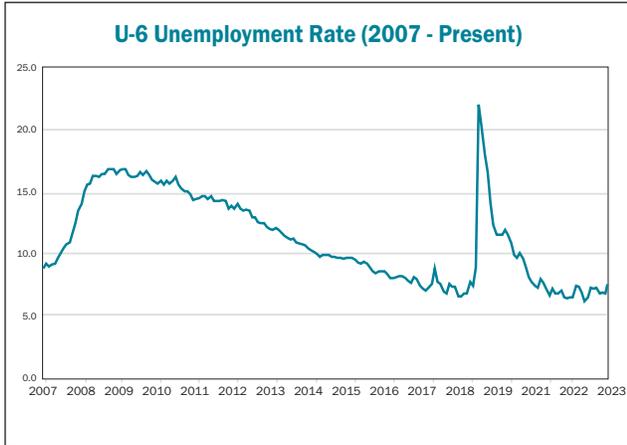

**P.S.** Four years ago, I developed a powerful trading system — one that's capable of producing at least 50% returns every year with just three trades per month. I previously kept this system my circle and myself. But after a four-year streak of consistency, I am finally going public with it. [Click here to get all the information.](#)

**INTELLIGENCE REPORT®**  
**Economic Analysis**  
 — REPORT —

The U-6 unemployment rate remains very low, implying a tight labor market and persistent inflation pressures.

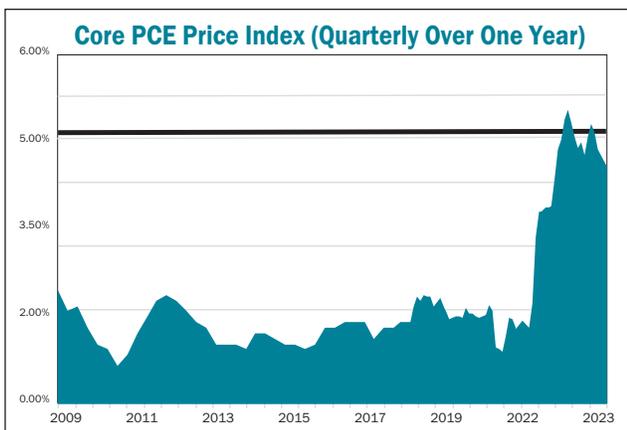

Business spending and corporate investment remains strong, which continues to be a positive for the domestic economy.

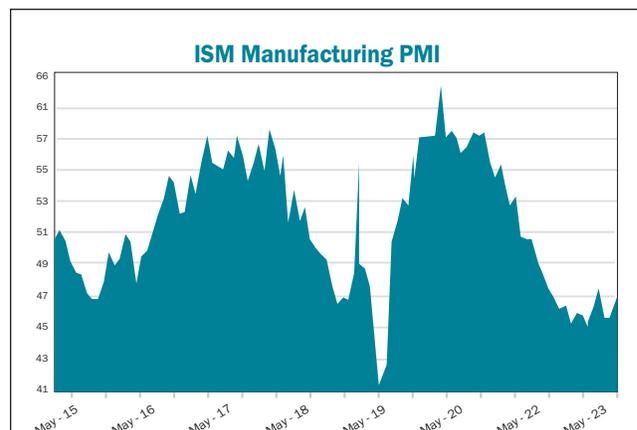

Chinese manufacturing growth remains subdued as concerns about the world's second-largest economy linger.

The 10s-2s yield curve remains stalled in inversion. Despite a seeming disregard for the metric, it continues to send a future recession signal.

The Fed's preferred measure of inflation has shown a decline in the metric; however, PCE remains well above the Fed's 2% target.

Manufacturing activity in the United States rose above 50 (barely) and there is some hope of a continued rebound in the manufacturing segment.

Tactical bond prices have declined moderately on higher-than-expected inflation readings.

The price of the yellow metal remains buoyant, as the safe-haven asset continues benefitting from rising geopolitical tensions.

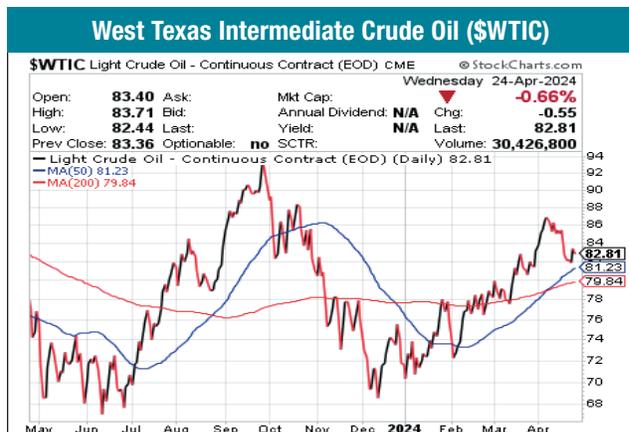

The benchmark domestic index experienced its first real pullback of 2024 after inflation metrics were higher than expected.

The value of the U.S. dollar versus rival foreign currencies has rallied to multi-month highs on hotter-than-expected inflation readings.

The global stock market's 2024 rise was put on pause last month due to fears of delayed interest rate cuts in the United States.

Oil prices spiked in April due to elevated geopolitical tensions in the Middle East and continued supply restrictions from OPEC+.

# Your Silver Passport to Travel the World

## The Five Most Popular Pure Silver Coins on Earth, in One Collection!

Dear *Woods Intelligence Report* Subscriber,

Travel the globe, without leaving home—with this set of the world's most popular pure silver coins. Newly struck for 2024, each authentic coin will arrive in exquisite Brilliant Uncirculated (BU) condition, as fresh and crisp as the day it left the mint in its respective country. Your excursion includes stops in the United States, South Africa, Canada, Great Britain and China.

### We've Done the Work for You with this Extraordinary 5-Pc. World Silver Coin Set

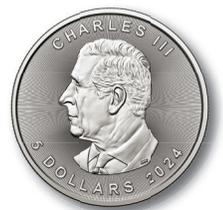

Each of these coins is recognized for its breathtaking beauty, and for its stability even in unstable times, since each coin is backed by its government for weight, purity and legal-tender value.

**2024 American Silver Eagle:** The Silver Eagle is the single most popular silver coin in the world. First struck in 1986 thanks to a law signed by President Ronald Reagan, Silver Eagles feature an iconic Adolph Weinman Walking Liberty obverse backed by Emily S. Damstra's superb Eagle Landing reverse. This \$1 legal tender Silver Dollar has a substantial 40.6 mm diameter and is struck in one ounce of 99.9% fine silver by the U.S. Mint.

**2024 South African Krugerrand:** Krugerrands have been synonymous with wealth, prosperity, and riches since the first one, struck in gold, rolled off the coin press in 1967. However, it wasn't until 2017 that the South African Mint

introduced the very first Silver Krugerrand bullion coin! This \$1 South Africa legal-tender 2024 Silver Krugerrand has a 38.72 mm diameter, and is struck in one ounce of 99.9% fine silver at the South African Mint.

**2024 Canada Maple Leaf:** Since 1988, the Silver Maple Leaf's elegant design has made it a highly sought-after bullion coin. This 2024 issue is the first time in over 20 years the obverse effigy has changed—this year's Silver Maple Leafs are the FIRST to bear an effigy of King Charles III, following the passing of Queen Elizabeth III. This \$5 Canada legal-tender, 37.97 mm diameter coin is struck in one ounce of high-purity 99.99% fine silver at the Royal Canadian Mint.

**2024 British Silver Britannia:** One of the Royal Mint's most popular coins, introduced in gold in 1987 and in silver ten years later, this 2024 Silver Britannia is the second in the Silver Britannia series to carry the portrait of King Charles III, following the passing of Queen Elizabeth II. The reverse features the magnificent Coin of the Year award-winning design of Standing Britannia. This £2 legal-tender coin features a 38.61 mm diameter and is struck in one ounce of 99.9% fine silver at the Royal Mint.

over, please

Call Toll-FREE today **1-888-201-7636** to Secure Your Silver Coins of the World Set!

- **First Time Ever** this set includes 2 coins with King Charles featured on the reverse
- **First Time Ever** the Silver Maple Leaf includes King Charles effigy
- **5 of the World's Most Popular** silver coins
- **All brand new 2024 issues**
- **Official government issues**
- **All in Brilliant Uncirculated condition**
- **Each coin struck in pure silver**
- **Save \$50 off our regular price!**
- **FREE Shipping & Handling on every order!**

**2024 China Silver Panda:** Since its introduction, the China Panda series has been one of the most widely collected, most anticipated series ever around the world—highlighted by charming one-year-only designs. Acquiring one of these coins can be difficult as demand for them within China’s borders is extremely intense, making them harder to find outside of the country. This year’s design, the sixth year in a 10-year “series within a series” chronicling a panda’s growth from cub to adulthood, features a mother panda playing with her cub. This 10 Yuan legal-tender coin is 40 mm in diameter and is struck in 30 grams of 99.9% fine silver at the China Mint.

### Silver for Your Collection

These coins, boasting stunningly detailed designs and gorgeous finishes that speak to their country of origin, are sure to hold a treasured spot in your collection. Plus, they have the extra benefit of having intrinsic value as silver.

### Putting this Set Together Would Take You Many Hours and Cost You More

You know it’s true. If you were to try to create this set yourself, you’d likely spend hours searching for each of these top five silver coins of the world at various other coin sellers—many of which don’t carry them, and certainly don’t have all five of them in stock. The bottom line is that we’re here to save you both time and money. And that’s not even counting the Presentation Case I am adding as a bonus.

Why spend hours finding and ordering these coins from several different places when we’ve already done the work for you? Plus—you won’t pay for separate—or ANY—shipping charges. That’s right, your SHIPPING IS FREE. And you won’t pay the regular price of \$249 either. Instead, your special call-in only

subscriber price is just \$199—a full \$50 off the regular price. And remember, here you’ll get a BONUS Presentation Case to show off and protect your 2024 World Silver 5-Coin Collection, along with a Passport informational booklet.

At this price, it would be a good idea to pick up several collections as appreciated gifts for family and friends, for birthdays, graduations, weddings, you name it.

### Just Released and AVAILABLE NOW!

These amazing, just released 2024 World Silver Passport 5-Coin Sets featuring five popular Silver Dollars from around the world are in stock now. Don’t wait. Call right away and your 2024 Set will ship directly to your door. Order immediately—before they’re gone!

From the man who's created safe and dependable options trading systems for 13+ years:

# The "Daily Payout" Plan

**In just 10 minutes each morning... trading ONE super-simple option, investors are putting hundreds or even thousands of dollars in their pockets**

Dear Investor,

Please look at the dollar signs on the calendar below. Each shows the date of a simple option win from January, 2023:

	SUN	MON	TUE	WED	THU	FRI	SAT
1		2	3	4	5 \$	6 \$	7
8		9 \$	10 \$	11 \$	12 \$	13 \$	14
15		16	17 \$	18 \$	19	20 \$	21
22		23 \$	24 \$	25 \$	26 \$	27 \$	28
29		30 \$	31 \$\$\$				

One simple option trade, made over and over...

Trading *around the same amount of money*... using the same ticker symbol...

Taking advantage of *the same simple strategy* each time...

Investors using this plan could have banked 19 wins. Zero losses.

And if an easy win didn't present itself during one of our trading days, we simply didn't make a recommended trade that day.

That win rate for the month isn't an outlier, either – as I'll share in a moment.

First though, even with this level of consistency, not every trade we make is a winner – and anybody who says they're winning every trade is lying to you.

But check this out:

Traders who followed our recommendations that month, and traded around the same amount of money in each trade...

Could have added up those 19 wins for a total return of 124% for the month.

That's right: a potential 124% gain in a single month.

That's enough to turn an initial \$500 into \$1,115... and \$5,000 into \$11,150.

Of course, that doesn't happen every month – sometimes we hit more wins, sometimes less.

The thing is, we do it over and over again, using just one ticker symbol.

**Hello. My name is Hugh Grossman.**

I've spent the last 13 years perfecting the ultimate option trading system.

And it's turned into what I consider to be the biggest trading breakthrough ever.

I say this because the recommendations this system generates have the potential of winning an astonishing 96% of the time, as of mid-August 2023.

Success like this is why my reader Hans G. proclaims:

***“Follow Hugh's rules and you WILL make money.”***

And reader Luna agrees, saying:

***“all you have to do is follow the rules...”***

And since traders get between 15 and 20 of these trades each month...

THEY COULD MAKE MONEY ON ALMOST ANY TRADING DAY.

That's why I call it my ***Daily Payout Plan***.

Now some may say January 2023's 19-0 record was a fluke...

It wasn't.

February 2023's recommended wins were almost identical to January's – even though the market conditions were **the exact opposite**.

In January, the market rallied over 6%.

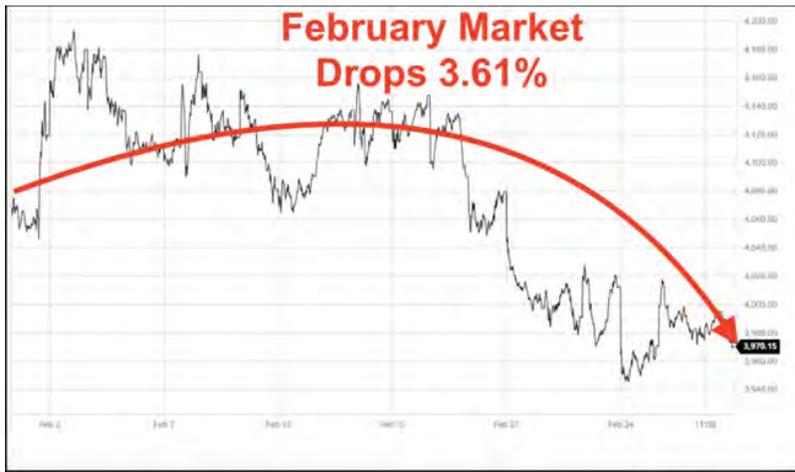

Yet February was the beginning of a six-week slide.

Trouble started brewing on the first day of the month.

Tension filled the air.

That was because threats of another rate hike from the Fed made traders nervous...

Which sent the S&P 500 *down* 3.61% for the month.

Yet investors following us in February had no worries.

The market's direction didn't mean squat to them.

Let me explain why.

We recommend trading simple "call" options when markets soar...

And we recommend simple "put" options when markets sink.

This means while investors made money trading calls in January 2023 in an up market, they could have traded "put" recommendations to help take advantage of the following February's sinking market.

The results from February 2023 are below:

2023 . FEBRUARY	SUN	MON	TUE	WED	THU	FRI	SAT
				1 \$	2 \$	3 \$	4
	5	6 \$	7 \$	8 \$	9 X	10 \$	11
	12	13 \$	14 \$	15 \$	16 \$	17 \$	18
	19	20	21 \$	22 \$	23 \$	24	25
	26	27 \$	28 \$				

Investors who followed the recommendations...

trading the same option over and over again...

Could have racked up 17 wins... and one 25% loss...

Plus, there were two days when no trades were recommended.

**Add up all of the small winners... and deduct the one small loser... and investors making these trades were looking at a 73% gain for February.**

How many traders made 73% in that miserable month?

So even in a down market, the **Daily Payout Plan** can live up to its name.

It was the same story in March of last year.

The markets panicked right out of the gate...

They kicked and reared and stumbled, sliding down a cruel slope, losing an additional 2.88% by mid-month...

And in the process, vaporized all of 2023's gains for the year!

But were investors following the **Daily Payout Plan** worried? Not one little bit.

Because they could have traded my recommendations...

Which included a simple mix of put trades when the market was falling and call trades when it was rising...

...trades that added up to **another great month!**

Check out how my **Daily Payout Plan** performed in March:

A calendar for March 2023. The days of the week are listed at the top: SUN, MON, TUE, WED, THU, FRI, SAT. The days of the month are listed on the left: 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31. Green dollar signs (\$) are placed in the following cells: (WED, 1), (THU, 2), (THU, 3), (FRI, 3), (MON, 6), (TUE, 7), (WED, 8), (FRI, 10), (TUE, 14), (THU, 16), (MON, 20), (TUE, 21), (WED, 22), (THU, 23), (FRI, 24), (MON, 27), (TUE, 28), (WED, 29), (THU, 30), (FRI, 31).

That's 20 trades. Twenty wins. A perfect track record for the month.

Trading the same ticker symbol for each trade.

And using around the same amount in each trade...

*Investors could have pocketed a total gain of 129% in one month.*

Again, just by adding up a series of small daily gains around 6%... divided by the amount invested on average each day... we get the total return for the month.

In other words, using my system investors could do what some experts *claim* to do but often don't...

They have the potential to make money when the market goes UP.

And the potential to make money when the market goes DOWN.

They could make money in either direction the market goes.

When investors can make money no matter what the market's doing... there's no safer way to trade.

That's why trader Dennis Avner proclaims the **Daily Payout** system is:

Trading the same amount in each trade, savvy traders could have blown the roof off with a single-month gain of 135.2%

That means they could have more than doubled their money in a single month.

If they kept investing no more than \$5,000 each day, they could have ended up with a total of \$11,685 – or \$6,685 in profits.

Then, in May, they could have piled up 16 more wins:

	SUN	MON	TUE	WED	THU	FRI	SAT
1		\$	X	\$	\$	\$	
7		\$	\$		\$	\$	
14		\$	\$	\$		\$	
21		\$	\$				
28			\$	\$			

And even with one loss of 27%... those 16 wins could have added up to **57.9% gains in May.**

In June and July, the wins kept coming in fast and furious.

By year's end, the total return for the year... INCLUDING the losers... was an eye-popping 533.8%...

Few investors make that in a decade.

Now, since no one else but my readers know this groundbreaking system... in the next 15 minutes I'm going to introduce you to my amazingly consistent **Daily Payout Plan.**

Not only is this plan a straight up call and put option service, but it's something more...

## A "Set and Forget" System for Making Money Every Month

It takes me a total of 10 minutes to place a trade.

Once that's done, I'll go meet a friend for lunch... or hit a bucket of balls at the driving range... or just kick back and watch TV.

I'll check in that evening to see how much my profits have grown.

How did I automate this set-and-forget system?

Each trade includes a built-in profit-target, which I set in advance with a limit order.

Once it hits that limit order – which it's done 96% of the time – it closes out my trade for me almost instantly.

And my average time to profit?

A fast 47 minutes, without me watching it.

We target 6% PER TRADE. And we average, with commissions, around 5.8%.

Many retirees hunger for a 6% yield in *a year*.

Yet we could average that each time we trade, almost daily.

All investors do is read the brief signal I send them each morning at 9 a.m. Eastern time.

If an easy opportunity presents itself, as it usually does...

Then they enter the trade right after the market opens along with its limit order price.

*There is usually nothing more to do except check for gains that night.*

Now, very rarely, as we've seen, a trade goes against us.

It's just not very often.

Midway through 2023 we had made 127 trades. And only five losses.

Bottom line: Making money doesn't get much easier than this. Nor any faster.

Now, it goes without saying that past performance is no guarantee of future results.

And the best recommendations in the world still depend on the individual investor being able to execute the recommended trade at the recommended price – which doesn't always happen.

Nevertheless, how much more straightforward can things be when investors trade the same way, with the same ticker symbol, in the same time frame, each day?

I feel like I've received some kind of divine favor, having discovered this system.

Winning this many trades can give people a new sense of confidence, knowing there is something that has the potential to work so well.

So today, I'm happy to reveal this system to new investors.

I'm willing to share it because this is a great way to trade today's market, especially if someone needs to create a steady source of dependable income...

That's what this **Daily Payout Plan** is designed to do.

In short: It's the safest, most trustworthy options trading system I've ever created in my 13 years of trading professionally.

It's proven to be highly accurate...

and almost copy-and-paste simple.

Furthermore, look at the total monthly gains investors could

have already made just half-way through last year...

57.9%... 73%... 124%... 129%... and *even* 135.2%...

But what if investors were to trade MORE money in each trade?

## **Investing More Make More Every Month**

Some of my wealthier clients – even if they weren't wealthy before they met me...

Now have the self-confidence to trade with between \$5,000 and \$50,000 each time.

Just to show what's possible with this system as people make more and more money...

Let's do some quick math.

Let's say someone traded an average of \$5,000 at a time.

If they make, on average, 6% or so each trading day, that would be a "daily payout" of around \$300.

With 20 trades or so in a month, that could add up fast.

The reality is that options never trade at precisely the same amount each day.

That's because the cost of an option varies. Some days they might cost \$3,750, other days \$4,800.

To protect themselves, many investors set a maximum limit each day.

How much is completely up to the individual investor.

For example, if someone had put \$50,000 into each trade I've explained so far, from January 2023 through July 2023...

And not withdrawn any cash...

In seven months, that \$50,000 could have mushroomed into \$316,900:

Does that mean I recommend everyone invest that much... or that my **Daily Payout Plan** always performs that well?

Of course not. We have losers, just not very many of them...

And no, I'm not saying past performance means future gains...

What I'm saying is this...

The more someone invests, the more they can make.

Look below to see how much more:

And when the payouts come as consistently as they have so far, it's easy to get used to that extra income.

That's the potential of my **Daily Payout Plan**.

And in a moment, I'm going to lay out the entire **Daily Payout Plan** right down to its nuts and bolts... to demonstrate how it

works and why it's so consistent.

I owe this to 13+ years of proving...

## **How ONE SINGLE ETF Lies at the Heart of My *Daily Payout Plan***

I use one exchange traded fund (ETF) to recommend trades. This one captures the entire S&P 500... which is the biggest stock index in the entire world.

It's the SPDR S&P 500 ETF Trust.

The ticker symbol is SPY (**NYSE:SPY**).

And it's the only symbol ever traded using the ***Daily Payout Plan***.

Why? First, it's easier to focus on one thing and trade the same investment repeatedly instead of chasing the latest hot thing.

Second, the SPY is one of the most heavily traded options on the market.

That means it's one of the most liquid. Which means investors can get into and out of a trade at lightning speed.

The SPY also gives people the ultimate diverse portfolio: It trades as a proxy for the entire market in just one investment.

And by repeatedly trading over and over again, investors become intimately acquainted with its movements and nuances in a way not possible if they focused on more than one stock.

I can recognize its movements across the trading day... its rhythms as SPY comes on strong, or when it rests...

In fact, when you get to the point where I am, doing this for more than 13 years, the S&P 500 begins to feel like an old

friend – one whom I know and trust.

That experience, knowledge and trust in trading SPY forms the foundation of my **Daily Payout Plan...**

And why I've consistently made hundreds, even thousands of dollars a day trading this one symbol.

Today, I'm offering new investors the opportunity to experience this level of profitability, reliability, and consistency of my **Daily Payout Plan.**

It's like creating a second income.

Until now, it's been one of the best-kept secrets in the trading world. Which is why...

## **Almost No One Has Heard of the Daily Payout Plan Before**

Until recently, this system has been a closely guarded secret with my family, my trading partner, Ahren Stephens, and a few friends...

But that's about to change.

I've agreed to allow additional investors and traders to join us trading the SPY...

For some, it could also be an educational journey, as they learn the trading secrets it's taken me more than a decade to refine...

For others, it's simply the chance to create an additional source of reliable, consistent cash flow.

I don't want to brag, but quite honestly, the **Daily Payout Plan** is my most successful trading plan so far.

It's small, fast and consistent daily wins are breaking new ground.

And the few who know about the **Daily Payout Plan** are using it to create a source of additional income they can count on

Best of all, investors can get started using my **Plan** with as little as \$5,000.

I recommend starting with more, because... as I've shared in my examples, these trades can range from a couple hundred to a couple thousand dollars each.

And I'd hate for one trade to go against us and wipe someone out.

Plus, I've seen investors begin to win trades, get more confident, then start making larger trades, making money even faster.

So today, I'd like as many people as possible to see my **Daily Payout Plan** for themselves.

But before I share the details, let me answer the question I get a lot:

## **Why Do These Options Trades Win... While Most Options Traders Fail?**

For investors who've tried an options service in the past, I bet that the majority of them have either lost money or, at best, broken-even...

That ends today.

That's because I'm going to explain how my **Daily Payout**

**Plan** takes advantage of the same trading secret used by Wall Streeters.

Professional traders call these “high-probability trades.”

And here’s the magic part:

With it, traders take small daily wins – with these high probability trades – and add them together. By the end of the month, they create significant sums.

That’s how investors using this secret could have been paid generous monthly gains of 57.9%... 73%... 124%... 129%... and *even* 135.2%...

From small, high-probability, consistent trades added together.

Now, it breaks my heart... but most options traders do precisely the opposite.

They want big triple-digit gains with every trade. And that means they have to take triple-digit risks.

Most traders “swing for the fences,” as the saying goes. And almost always strike out.

In the process, they become one of the 9 out of 10 options traders who fail, and then give up on trading entirely.

NOT ME.

I prefer the small, easy, high-probability trades.

You simply add them together. And by the end of almost every month, that can net between 50% and 150% gains.

Here’s another question I often get:

**Can an Inexperienced Options  
Trader Use the *Daily Payout Plan*?**

The answer is Absolutely: YES!

The fact is, I designed this system to be as easy to use as possible.

Typically, it takes most people about 20 minutes to learn this system. Others may figure it out faster... some, slower.

The bottom line is this: it's not brain surgery. It's just trading calls and puts on the SPY.

There is no complex trading manual that takes months to slog through. No complicated charting system to master.

The beauty of this system is that it only trades a single investment over and over again.

And Ahren and I tell people exactly how to do it.

For investors already familiar with how to buy and sell a simple call or put...

They're more than halfway home.

Basically, 3 things are needed to use my ***Daily Payout Plan***

1. An email account to receive my daily trade recommendation – or a cell phone to read my daily text.
2. An online brokerage account approved for trading simple “calls” and “puts.”
3. Preferably a minimum of \$5,000 to start with. \$10-\$15,000 may be more appropriate for some.

After those three things, it's a matter of simply following my

instructions.

I'll share the exact trading symbol to enter into an online brokerage account and the specific target price and expiration date.

Then, it's simply a matter of setting a sell price to automatically trigger once it's hit. That's also the same every day: 6% above the buy price.

That's all there is to it.

*All this takes just five to 10 minutes each morning.*

This can even be done by cell phone, in a pinch.

That's it. The system is designed to make money fast 96% of the time we recommend a trade.

Let me share something else...

## **ONE REASON I Never Fear Crashes, Volatility, or Recessions**

This system was forged in the aftermath of the 2009 crash.

It rose from the ashes of the Obama recession, sailing past eight years of stagnant economic growth...

The plague of the European debt crisis, causing global instability...

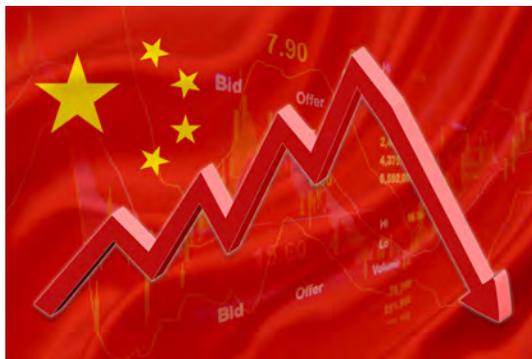

The mayhem on Wall Street during the USA credit downgrade crash of 2011...

Record high gas prices rocking markets from the pump...

China's 40% collapse of 2015...

## The Corona Crash of 2020...

Through each crash, crisis, and collapse, I had ZERO worries.

Here's why:

*Using my Daily Payout Plan, Ahren and I trade both up and down markets... that way we can make money both ways.*

We recommend trading "calls" when the S&P 500 is going up...

And "puts" when the S&P 500 is going down.

**To decide which, we want to answer one question at the opening bell...**

Over the course of the coming day: Is the market going to move up or down?

Our proprietary indicators suggest which direction the S&P 500 is likely headed for the day...

And based on that short time frame, we set out to grab a quick gain at the right time... aiming to sustain our 96% accuracy rate.

We really don't give a rip WHERE the market's going, up OR down... we simply follow it where it wants to go.

***All it has to do is move. We can make money either way.***

If that approach sounds simple, that's because it really can be. After a handful of trades, it becomes second nature for some investors.

Yet there's one ultimate test:

Would I teach it to my own children?

The answer is YES!

## I've Taught My Own Family To Use this System

Leaving kids money is one thing.

It's quite another to leave them a legacy most parents can only dream of:

The ability to make money trading, virtually daily.

It's a relief to not have to worry about my children blowing their inheritance on sudden riches... or it being romanced away by some sweetheart con artist...

Nor do I worry about my kids ending up broke someday in a shabby nursing home – not when they can use the **Daily Payout Plan** any time they wish.

And finally, I've given my wife the gift of never having to worry about running out of money in our retirement.

It's my legacy to those I love.

Now, with that said, here's another question I get asked a lot:

## How Did I Create the **Daily Payout Plan**

After my previous career ended...

About 20 years ago, I retired from being a top auditor for a **Fortune 500** company.

Auditors are trained to look for things hidden from the untrained eye...

They taught me clandestine tips, tricks, and strategies to make me an expert at analyzing numbers and spotting patterns.

That's how we caught the bad guys.

Now, analyzing numbers and finding patterns are the two skills professional traders need to find winning investments.

And more importantly... it's how someone builds a system that's consistently profitable... one that detects those patterns that repeat over and over again.

And since I left the corporate world, I've used the private "numerical analysis" and "pattern recognition" systems that were drilled into me...

And created one of the most consistent, most profitable trading systems ever.

In 2022, with trading going so well, I welcomed my partner, Ahren Stephens, into the room.

Ahren has a passion for the markets. He started studying them while still in his teens, focusing on research and analysis.

He opened his first trading account at the age of 18 and has studied the stock market, forex market, and commodities market for more than 20 years.

After the market crash of 2001, Ahren started learning technical analysis in the forex market. He is also a self-made market technician.

Today, he is a licensed commodity broker, and he was most recently an analyst at an award-winning, multimillion-dollar firm.

Bringing Ahren in was the best decision I ever made.

And it's one of the reasons why traders are so happy, like Darold Opp who proclaimed:

***“Hugh has developed a plan through YEARS of successes...”***

And now it's time to give other investors the same chance to feel this good about trading options...

So here's the moment everyone's been waiting for...

## **Exactly HOW My Daily Payout Plan Works**

Follow along closely. This is where I reveal my trading secret.

Years ago, I detected a “glitch” in the way big markets perform.

You see, the major market indexes, like the S&P 500, trend *strong* first thing in the morning.

In the first few minutes, they tend to go one way or the other, up or down... just long enough for my system to make a quick profit.

My proprietary system verifies the likely direction of the market 30 minutes before the open...

I send investors an email and a text of which SPY option trade will exploit the day's market for fast returns... a call or a put, depending upon what our indicators tell us.

Then we ride that early morning surge, up or down...

And we aim for a profit that averages 6%.

That's all there is to it.

Usually our trades are over and done within 47 minutes, although sometimes they can take longer.

And then the next day, we wash, rinse, and repeat – all the way to the bank.

And because of this simple, almost “boring” strategy, I’m more than set for life.

So is my family.

And I can show investors how to get on the path to doing the same thing.

The people I’ve shown my **Daily Payout Plan** to are almost ecstatic. Like trader Terry Walthall, who said:

**“...I’m in and out of the market usually the same day – and many times IN MINUTES – consistently earning 5% – 7%!”**

For investors like Terry, who know the value of taking small, fast gains, almost every day – and how they can add up over time – my **Daily Payout Plan** is a great place to start.

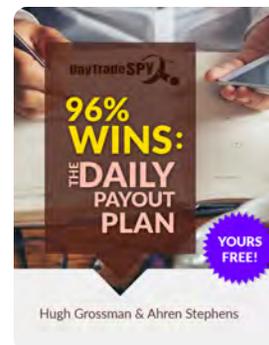

That’s why I’m sharing this message...

I want as many investors and traders as possible to have the same chance to make consistent, almost daily gains like these using my **Daily Payout Plan**.

So, I’ve created a special investment report that explains it all. This blueprint is a \$349 value, but I’m giving it away free today.

It’s called: **96% Wins: The Daily Payout Plan**.

With this one-stop guide, smart investors hit the ground

running and pocketing fast, almost daily cash with consistent wins.

Every trader I know loves dependable, high-speed profits like these.

Especially when it's all based on a simple strategy:

1. Trading options on the SPY repeatedly... SPY is the ETF that tracks the world-famous S&P 500...
2. Getting in at the opening surge, taking full advantage of its momentum, up or down...
3. And riding this early wave to the target profit of 6%

Three simple steps.

Plus, with my free trading guide **96% Wins: The Daily Payout Plan**, investors will have a handy reference guide to help with the ins and outs of making these trades.

No more searching for the right stock or ETF. It's already preselected.

And even though we're only trading one symbol, we're still getting a "diversified" portfolio.

With the SPY ETF, we're actually trading all 500-stocks within the S&P 500 index, whether it's going up or down.

For me, that's...

## The Dream System

And I'm sure, by now, many investors agree.

They know the benefits of making just one simple trade, using a single ticker symbol... and how quickly they can make fast daily returns.

They've seen how small constant wins can add up to monthly gains sometimes big enough to double their money.

They've seen how options limit their exposure to the market by costing a fraction of what shares themselves go for.

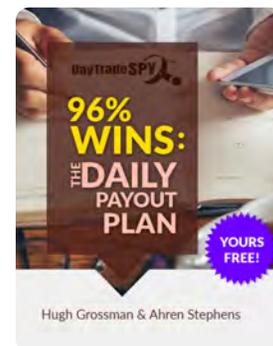

They understand.

So now I want to help new traders and investors use my **Daily Payout Plan** to make money day after day.

That's why I prepared all the details for using my *Plan* in the free special report discussed earlier...

**96% Wins: The Daily Payout Plan.**

If I were to sell it to the public, I would ask for \$349, easy.

But it's free today, as my gift.

Now I only ask one thing in return:

## Accept My Special Invitation: 30 Days Risk-Free of *Pick of the Day* Trading System

It's time for investors to see for themselves just how profitable this **Daily Payout Plan** really is... and how it can pile up small daily winners into sizable total profits each month.

The name of my service with my Daily Payouts is **Pick of the Day**.

Investors who join **Pick of the Day** today, will get my free special report: **96% Wins: The Daily Payout Plan** (\$349 Value!)

They'll also begin to receive **Pick of the Day** daily trade alerts, delivered via email or text each morning about a half hour

before the market opens.

Imagine opening my email each morning like a kid opens a present on Christmas...

and discovering how to make a quick trade and pocket 6%, within just a few minutes.

Here's what else investors will get with a **Pick of the Day** membership:

- ✔ A specific call or put option recommendation almost every trading day... one that my trading partner Ahren and I will likely trade too
- ✔ Recommendations via email or text that are delivered before 9:10 am EST
- ✔ The chance to average 6% a day consistently

Bottom line: with my **Daily Payout Plan**, investors are about to enter a world where they pocket hundreds – maybe thousands of dollars – each day.

One more thing I should mention...

As good as 2023 was for the **Daily Payout Plan**...

## The Coming Months Could Be Even Better

People who follow our recommendations to generate extra cash, day after day, week after week, suddenly discover they can do things they couldn't before.

The truth is, when someone has the ability to make 50% to 100% gains – or more – in profits, per month, it's going to have an effect on their lives.

Whether having more money is actually better, investors will have to decide for themselves.

But what's it worth to get that choice?

Not \$5,000 a year, like other high-end traders charge each year for a proven system...

Not \$3,990, which is what I usually charge each year for this system...

Today, a small group of investors can get in for a very affordable ~~\$1,000~~ **\$399** per quarter.

Which can be paid for with just one or two winning trades.

So, for investors who are intrigued by my ***Daily Payout Plan***...

And by making small wins, averaging 6%, day after day consistently... and piling up those wins month after month...

Please accept a trial subscription to my ***Pick of the Day*** trading service where you'll find my ***Daily Payout Plan*** recommendations.

By accepting a trial membership, investors get 30 days to test-drive my proprietary ***Daily Payout Plan***.

And my...

## **NO QUESTIONS ASKED, 100% Money-Back Guarantee!**

By accepting this trial membership, investors get 30 days to check out ***Pick of the Day*** and my ***Daily Payout Plan*** recommendations... 100% risk-free.

During that time, use real money or just paper-trade the recommendations.

At the end of that first 30 days, anyone not delighted by the service, or how much money they've made... or could have made, just let me know.

I'll refund 100% of the membership fee, no questions asked.

However, do not delay.

In fact, to encourage people to act fast, my publisher and I created the deal I told you about earlier – three months of **Pick of the Day** for just \$399.

Regularly, the service goes for \$1,995 a year – meaning that \$399 price is more than 80% off what we normally charge.

Because that discount's so steep, I can only offer it to the first 37 people to sign up today. After that, anyone joining the service today may have to pay the full \$1,995 for a year.

So decide now: Join **Pick of the Day** by clicking the button below.

**Place My Order!** 

The truth is, I love trading. And I love helping other traders even more.

I've made all the money I'll ever need... many times over.

I help others succeed in trading because it's personally rewarding.

I want as many people as possible to join Ahren and me, and to encourage people to check us out...

We're offering the first 37 new members to sign up the chance to get three months of Pick of the Day for just \$399.

However, I only want 37 new traders who will be thrilled by getting in today. If that doesn't apply to anyone still with me, please do me a favor:

Step aside and let someone else in who will be excited to be here.

I want people who are motivated to use my **Daily Payout Plan**.

## Now There's a Choice

Investors can choose to invest the old way, and hope to build their nest egg little by little, taking whatever the markets give them...

Or they can try out my 96% accurate daily trading strategy risk-free for 30 days.

It's their decision. I have no doubt I will fill those spots fast.

And that every one of them will stick around well past that first 30 days.

I believe that by following my trades, people can dramatically grow their investment portfolio month after month.

To that end, join us for the ride.

Just click the button below to get started.

**Place My Order!** 

Yours for higher profits,

Hugh Grossman  
Trading Director, **DayTradeSPY**

**P.S.** Here's a list of our daily wins from January to the beginning of June:
